PROFESSIONAL SUMMARY

Economics and Accounting graduate (UC Santa Barbara, 2026) with five years in operations, finance and growth at 64Facets, a founder-led luxury jewellery brand. Mapped four core business processes, automated a CRM migration with a locally run AI model so client data stayed private, and rolled out AI-assisted steps the CEO agreed saved time across all four. Builds AI systems with written rules, tests and a second model's review; project write-ups at adiyt4soni.github.io.

PROFESSIONAL EXPERIENCE

64Facets | Los Angeles, CA

Business Strategy and Operations Associate — *September 2021 to October 2026*

- Mapped the order, wholesale, reporting and outreach processes with the team, spotted where the business systems did not connect, and kept a tracked list of improvements in order of impact, reporting progress to the CEO.
- Flagged early to the CEO that re-entering 900 pieces into a new CRM by hand would take months; made the business case, weighing time saved against 3 to 4 hours a day of manual entry, and a local model against the cloud for privacy and cost.
- Built the automation with Claude and Codex: it pulled the piece data from the old CRM, cleaned and reformatted it and entered it into the new one, with a locally run open-weight model doing most of the entry to keep company data private; it handled a substantial portion of the move and saved about 4 hours of manual work a day.
- Spot-checked early output by hand before trusting the automation, checked results against the old system, and tested the new CRM before colleagues used it.
- Introduced templates, workflow rules and AI-assisted steps one process at a time, including AI-drafted follow-ups to clients and stockists and an AI step to prepare audit documentation and the month-end close.
- Wrote quick-start guides, taught colleagues to use AI in small-group sessions and was the go-to person for AI help; on finding an AI tool reading sensitive information, stopped that process, moved the work to a local model and told colleagues which data must not go into AI tools.
- Opened new stockist accounts in Europe and the Middle East, ran paid digital campaigns, did the monthly variance analysis in QuickBooks, and worked trunk shows at Neiman Marcus, Saks Fifth Avenue, Bergdorf Goodman and Nordstrom.

Loan Frame | New Delhi, India

Credit Department Intern — *August 2024 to September 2024*

- Reviewed 10+ live SME credit files at a fintech lender under the Chief Credit Officer, within the lender's KYC and AML approval workflow, and identified manual re-keying of company financials as an automation opportunity.

Outlier AI | Remote

AI Trainer (Contract) — *February 2024 to May 2024*

- Judged AI model answers to hard mathematics and reasoning questions for accuracy, coherence and reasoning, and wrote a justification for each rating, about 20 problems a day.

AI PROJECTS

Built with Claude Code and Codex. AI writes the code; each change is read through, adjusted and checked with tests and a second model's review.

- Job search and outreach system: screens about 415 company job boards against written rules (one sweep: 25,037 postings down to 4 for an AI read), builds a tailored CV per role, and blocks anything below the bar before it goes out; 150 automated tests pass.
- Vex, private AI assistant: runs on a local open-source model (gpt-oss 20B through Ollama), so personal data stays on the laptop; permissions are enforced in code, and changes are reviewed by a second AI model before they merge.
- Argus, research tool: pass marks are written before every test; exposed a flattering +168% backtest as survivorship bias and rejected 7 rules on criteria set in advance. Simulated trading only.
- Tau, health data: pulls WHOOP API data on a schedule; checking live data against earlier output found a metric scaled by 1,000 and a 12.5-hour timezone bug, and checks now guard both.
- London rental search: collected listings, commute times and public area data, then had AI agents review about 7,500 photos across about 930 listings against a written rubric; produced a ranked shortlist and a booked room.

EDUCATION

University of California, Santa Barbara

Bachelor of Arts in Economics and Accounting — *Graduated March 2026*

- Vice President of Finance, Finance Connection: weekly equity-research sessions, operations and member development for a student finance society of 100+ members. Earlier: Moorpark College, 2021 to 2023 (transfer coursework before UC Santa Barbara), Phi Theta Kappa.

SKILLS & TOOLS

Process and automation: process mapping, business cases, requirements with users, test runs before rollout, human checks on automated output, KPIs

AI tools: Claude Code, Codex, ChatGPT, VS Code with GitHub Copilot; AI agents, local open-weight models (Ollama, llama.cpp); Python and SQL (beginner)

Workplace tools: Excel (VLOOKUP, SUMIFS, charts), Google Sheets, PowerPoint, Word, QuickBooks, Shopify, Trello

Languages: English and Hindi
