PROFESSIONAL SUMMARY

Economics and Accounting graduate (UC Santa Barbara, 2026) with five years running operations, finance and growth at 64Facets, a founder-led luxury jewellery brand. Good at spotting the manual work everyone has stopped questioning, and replacing it. At 64Facets that meant a CRM migration handled by a private, locally run AI model, then AI-assisted steps in four core processes that the CEO agreed saved the team time. Builds with Claude Code and Codex, and nothing goes live until it has passed tests and a second model's review. Projects at adiyt4soni.github.io.

PROFESSIONAL EXPERIENCE

64Facets | Los Angeles, CA

Business Strategy and Operations Associate — *September 2021 to October 2026*

- Mapped how orders, wholesale, reporting and outreach actually ran, found where the systems didn't talk to each other, and kept a ranked list of fixes, reporting progress to the CEO.
- Warned the CEO early that re-keying 900 pieces into a new CRM by hand would take months, and made the case for automating it: 3 to 4 hours a day of manual entry on one side, a private local model versus a cloud service on the other.
- Built the automation with Claude and Codex. It pulled each piece from the old CRM, cleaned it up and entered it into the new one, with a locally run open-weight model doing most of the work so company data stayed private. It moved a substantial share of the records and saved about 4 hours of manual work a day.
- Didn't take the output on trust: checked early output by hand, compared the results with the old system, and tested the new CRM before anyone else used it.
- Brought AI into everyday work one process at a time, with templates, workflow rules, AI-drafted follow-ups to clients and stockists, and an AI step for audit paperwork and the month-end close.
- Wrote quick-start guides, ran small-group training and became the person colleagues asked about AI. When one tool turned out to be reading sensitive information, shut that process down, moved it to a local model and set clear rules on what data stays out of AI tools.
- Opened new stockist accounts in Europe and the Middle East, ran paid digital campaigns, did the monthly variance analysis in QuickBooks, and worked trunk shows at Neiman Marcus, Saks Fifth Avenue, Bergdorf Goodman and Nordstrom.

Loan Frame | New Delhi, India

Credit Department Intern — *August 2024 to September 2024*

- Worked through 10+ live SME credit files for the Chief Credit Officer at a fintech lender, inside its KYC and AML approval process, and flagged the manual re-keying of company financials as something worth automating.

Outlier AI | Remote

AI Trainer (Contract) — *February 2024 to May 2024*

- Graded AI answers to hard maths and reasoning problems for accuracy, coherence and reasoning, with a written justification for every rating, about 20 a day.

AI PROJECTS

Built with Claude Code and Codex. AI writes the code; every change gets read, adjusted and checked against tests and a second model's review.

- Job search system: screens about 415 company job boards against written rules. One sweep took 25,037 postings down to the 4 worth an AI read. It builds a tailored CV for each role that passes and blocks anything below the bar; 150 automated tests pass.
- Vex, a private AI assistant: runs on a local open-source model (gpt-oss 20B through Ollama), so personal data stays on the laptop. What it may do is enforced in code, not prompts, and a second AI model reviews changes before they merge.
- Argus, investment research: pass marks are fixed before any test runs. It exposed a flattering +168% backtest as survivorship bias and rejected 7 rules on criteria set in advance. Simulated trading only.
- Tau, health data: pulls WHOOP data on a schedule. Checking live data against old output caught a metric off by a factor of 1,000 and a 12.5-hour timezone bug, and checks now guard both.
- London rental search: gathered listings, commute times and public area data, then had AI agents review about 7,500 photos across 930 listings against a written rubric. It ended with a ranked shortlist and a booked room.

EDUCATION

University of California, Santa Barbara

Bachelor of Arts in Economics and Accounting — *Graduated March 2026*

- Vice President of Finance, Finance Connection: ran weekly equity-research sessions, operations and member development for a student finance society of 100+ members. Before UCSB: Moorpark College, 2021 to 2023 (transfer coursework), Phi Theta Kappa.

SKILLS & TOOLS

Process and automation: process mapping, business cases, gathering requirements from users, test runs before rollout, human review of automated output, KPIs

AI tools: Claude Code, Codex, ChatGPT, VS Code with GitHub Copilot; AI agents, local open-weight models (Ollama, llama.cpp); Python and SQL (beginner)

Workplace tools: Excel (VLOOKUP, SUMIFS, charts), Google Sheets, PowerPoint, Word, QuickBooks, Shopify, Trello

Languages: English and Hindi
